Would you like to learn more about our Windows Loader v2 2 2 by Daz? If so, please continue reading below! What is a Windows Loader? Whenever a user installs an app on a computer that doesn't have a license for the app, the installer leaves behind what is known as a loader. Basically, this loader is completely useless from the perspective of whoever installed it. But from our perspective as malware authors, this loader can be utilized as part of something known as ransomware! That's where Windows Loader 2.2 by daz comes in to play!

Ransomware (such as Ranscam) encrypts your important files and demands you pay up to decrypt them. Windows Loader uses this technique as a way to infect your system. Once the loader is installed, it will actually encrypt your hard drive for ransom. If you don't pay up within a certain amount of time, then it will start deleting files from your hard drive until the disk is totally empty! What makes Windows Loader 2.2 By Daz different from other ransomware? We at A-Secure believe that most malware authors these days are simply taking their word for it when they post "translations" of their ransomware. It looks great at first glance, but most of the words are simply gibberish, mashed together from various language "dictionaries." Windows Loader 2.2 By Daz doesn't have this problem. It actually has a completely different gibberish word in every ransom note! We believe this goes a long way in making it much harder for you to dismiss Windows Loader 2.2 By Daz as a scam. So How Do I Get Windows Loader 2.2 By Daz? So how can you get Windows Loader 2.2 By Daz? Well, you can download the full user's guide from A-Secure's website below: [http://www.a-secure.com/windows-loader-v202-by-daz/downloads/windows\\_loader\\_v2\\_2\\_2\\_by\\_daz\\_userguide\\_eng\\_en\\_us\\_pdf.pdf](http://www.a-secure.com/windows-loader-v202-by-daz/downloads/windows_loader_v2_2_2_by_daz_userguide_eng_en_us_pdf.pdf) . pdf We at A-Secure have put a lot of work into Windows Loader 2.2 By Daz, so we hope you enjoy it!

ARTICLE END] OPSWAT has a decrypter tool for this threat. It is not a Ransomware but just a ransomware scam. It does not encrypt files, it just shows some fake warnings and locks the PC for some time. Then it asks users to pay \$50-\$100 as a fine by MoneyPak to unlock PC. The Daz Windows Loader 2.2 Ransomware is designed to encrypt files on your computer by first installing a Trojan horse on your PC. The Trojan will then lock the PC for 2-3 days before it starts asking for money. It does this by displaying fake messages claiming that your computer has been locked due to illegal activities. The messages are not very clear however, so it is very easy to notice them as scammers are easily able to make up some fake message using some text from the internet.
